noax Logistics Terminals in Continuous Use at Eurogate

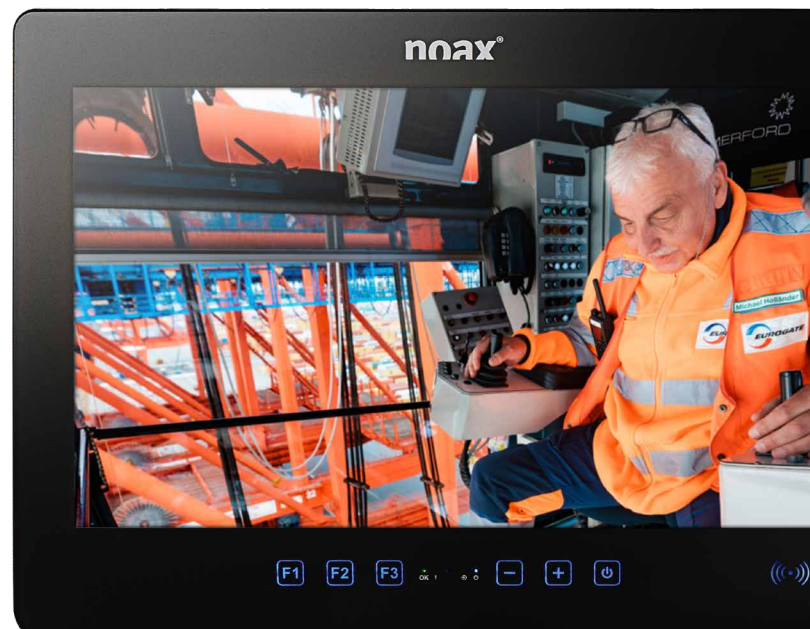

Built for the Port – Made for the Extreme

In port operations, two things matter most: reliability and durability. At Eurogate's container terminals, technical requirements are particularly demanding. Salty air, extreme temperature fluctuations, constant vibrations, and 24/7 operation push both people and machines to their limits. Every component must function under real-life extreme conditions – day in and day out – without failures or compromises.

For many years, Eurogate has relied on more than 300 industrial PCs from noax – installed on van carriers, rail cranes, and container bridges. The devices have proven themselves: They run reliably, integrate easily into various vehicle types, and support work processes around the clock in shift operations.

EUROGATE

Flexible & future-proof

Another advantage of noax systems is their flexibility: when vehicles such as van carriers are taken out of service, the noax PCs installed in them are not written off, but simply transferred to new vehicles. This not only reduces investment costs, but also significantly increases the service life of the technology. "The noax PCs are like the good old car radios – they outlive the vehicle," says one project manager. "When the van carrier is taken out of service, we simply install the PC in the next vehicle."

For Eurogate, one thing is clear: investing in durable, robust technology pays off – day after day in everyday port operations.

Once a noax user, always a noax user!

At Eurogate, no one talks about the logistics terminals anymore – and that's a good sign. Because when technology goes unnoticed in everyday port operations, it means it's working. Day after day. Shift after shift. Without question.

"We've been relying on noax for years – and we're still convinced," says a long-time project manager. "The devices work. Period. We don't have to worry about them. That's exactly what we expect from industrial hardware." Whether extreme temperatures, vibrations from heavy vehicles or the salty air directly at the quay edge – the noax terminals hold up. And if there are any questions, quick help is guaranteed: "One call – and we get immediate support. No contracts, no waiting loops. That has become rare." There is also hardly any feedback from the users of the devices – and that is almost a rarity in port operations: "A port employee who doesn't complain is not healthy. But there are simply no complaints about the noax terminals."

Why noax?

Engineered for Harsh Environments

▷ Vibrations, saltwater, weather – no problem

Maximum Availability

▷ Durable technology for 24/7 operations

Fast Support When It Matters

▷ Direct help – no call center queues

An Investment That Pays Off

▷ Fewer breakdowns. Greater security
